

# Pre-Paid Puppy Package

- ☆ Snake River Veterinary Center is honored to be your pet's healthcare provider. To start your puppy off on the right paw, we have created a specially priced package for your new pet.
- ☆ Once weaned, puppies start losing the antibodies they have received from their mother's milk. To ensure proper protection against viruses and other diseases, it is recommended they receive a series of vaccinations. This series of 3 or 4 vaccines (depending on the age when the vaccine protocol is started) should be given at 3-week intervals, starting at 6 weeks.
- ☆ Along with vaccines, we have included a fecal analysis to check for parasites as well their first parasite preventative, which covers internal and external parasites.

The package below is discounted to give you a total **savings** of approximately **30%**. This package is to be purchased at your initial visit with your puppy.

This package also includes **10% off your pet's spay or neuter surgery** as well as optional bloodwork and microchipping done at the time of the surgery. *This discount is only valid if your pet is spayed or neutered before 14 months of age.*
